School Management System

Functional Requirements Document

What the system should do, how the school uses it, and how the modules connect

Version 1.0 | October 2026

Prepared for: School administration, principal, accounts staff, teachers and the software development team

Based on: the audit of the current NNS Secondary School management system (18 October 2026) and the supplied admin dashboard screenshot

Document type: functional description of the intended system - what it does and how it is used. It is not a checklist and not a programming specification.

18. Glossary 60

19. Scope and Assumptions 61

Introduction

This document describes the school management system the school intends to use. It explains, in plain language, what each part of the system does, how school staff use it in everyday work, what information it records, what it produces, and how the parts depend on each other. It is written for the principal, administrators, accounts staff and teachers, and can be handed to a development team as the agreed description of the system.

How the system is organised

The sections follow the order in which a school is set up and then used: first the school and users are configured, then the dashboard, admissions and records, then classes and money, then rules, attendance, exams, reports and the website. A final section shows how everything works together in everyday workflows.

Foundation (set up first)	Daily records	Money	Teaching and results	Outside the school
1 School setup 2 Login & permissions 9 Classes & subjects 12 Rules & settings	3 Dashboard 4 Admission 5 Students 6 Teachers 7 Other staff 8 Families	10 Fee system 11 School accounts	13 Attendance 14 Exams & results 15 Reports	16 Website

Source labels

Each feature carries a label showing where it comes from, so readers can tell what already exists in the current system from what is proposed.

Label	Meaning
Observed in current system	Seen during the read-only audit of the current system. The screen and its fields were recorded; actions such as saving or sending were not run.
Shown in dashboard screenshot	Taken from the supplied screenshot of the current admin dashboard.
In current system - NOT confirmed	Listed in the current system but locked, premium-only or not inspected, so its behaviour was not verified. Described here as a requirement.
Recommended for new system	A proposed requirement that was not found in the current system, or an improvement to it.

How each feature is described

Every feature card answers the same questions: what it does, how staff use it, what information it records or shows, what it produces or changes, a short school example, and who uses it.

1. Administrator & School Setup

Before anyone uses the system day to day, the main administrator enters the school's identity, opens the academic year, defines the working calendar and class structure, and creates the user roles. This section explains that first-time setup and how each new academic year is started without disturbing old records.

School setup is done once at the start and reviewed at the beginning of every academic year. Almost every other part of the system depends on it: printed vouchers and report cards take the school name and address from here, attendance uses the working days, and fees, attendance and results are all stored under the academic year that is open at the time.

1.1 School profile and identity	Observed in current system
What it does	Holds the school's official identity used across the system and on every printed document.
How staff use it	The administrator enters the details once during setup and corrects them whenever something changes, such as a new phone number.
Information recorded or shown	School name, campus name, full address, main phone numbers, office email, logo, and the name and title of the head of school. In the audited system the school name, address and phone number appear on printed admission and employment forms, and contact details are maintained in the website settings.
What it produces or changes	Every voucher, receipt, report card, certificate and letter is printed with the same correct heading. Changing the phone number once updates all future documents.
School example	The school moves its office line to a new number. The administrator updates it in the school profile, and next month's fee vouchers already show the new number.
Who uses it	Main administrator

Recommendation: keep a separate 'document identity' area for the logo, letterhead, school stamp image and authorised signatures, so documents can be updated without editing the school's basic details.

1.2 Academic year (session) set-up and switching	Observed in current system
What it does	Divides the school's records by academic year, for example 2026-2027, so that each year's admissions, fees, attendance and results stay separate.
How staff use it	The administrator creates the new year with its start and end dates and marks it as the current year. Staff can switch to an earlier year from the page header to look at or print old records.
Information recorded or shown	Year name, start date, end date and whether it is the current, upcoming or closed year. The audited system shows a year selector in the header and keeps history back to 2016-2017.
What it produces or changes	New entries are saved under the current year. Reports and dashboard totals refer to the selected year, so figures from different years are not mixed by accident.
School example	In March the office opens 2027-2028. April fee bills are created in the new year, while last year's results remain available when a parent asks for an old report card.
Who uses it	Main administrator, principal

1.3 Opening a new academic year	Recommended for new system
What it does	A guided step that prepares the next year without retyping data or overwriting the old year.
How staff use it	The administrator chooses which items to carry forward (classes, sections, subjects, fee structure, grading rules), reviews them, and then runs student promotion (see Student Management).
Information recorded or shown	Items copied, items changed, date of opening and the person who opened the year.
What it produces or changes	A ready-to-use new year with the same structure. The closed year becomes read-only except for authorised corrections.
School example	Fee amounts rise by 10%. The administrator copies last year's fee structure, edits the amounts, then opens the year.
Who uses it	Main administrator

1.4 School working days and holidays	Recommended for new system
What it does	Defines which days of the week the school is open, and the holidays in the year.
How staff use it	The administrator selects the weekly working days (for example Monday to Saturday) and enters public holidays and vacations in the school calendar.
Information recorded or shown	Weekly working days, half days, holidays and vacation periods. The audited system already lets staff mark holidays and Saturday/Sunday off in bulk attendance and keeps an events calendar.
What it produces or changes	Attendance registers and percentages count only working days; the dashboard does not warn about missing attendance on a holiday.
School example	Summer vacation from 1 June to 14 August is entered once; no attendance is expected and no student is counted absent in those weeks.
Who uses it	Main administrator

1.5 Class and section structure	Observed in current system
What it does	Creates the list of classes and their sections before students are admitted. Full details are in Section 9.
How staff use it	During setup the administrator enters every class from the youngest to the oldest and adds sections where a class is divided.
Information recorded or shown	Class names, short names, display order and sections.
What it produces or changes	Admission forms, attendance, fees and exams can all select a class and section.
School example	Play Group to Class 10 are created, and Class 8 is split into sections A and B.
Who uses it	Main administrator

1.6 Main administrator account	Observed in current system
What it does	The first and most powerful account, used to configure the system and create other users.
How staff use it	Created at installation. The main administrator then creates other accounts and assigns roles (see Section 2).
Information recorded or shown	Name, contact details, photo, login name and password. The audited system lets the administrator update their own profile and password.
What it produces or changes	A single responsible owner for setup. Sensitive actions can require an additional passcode, which the audited system does for accounting screens.
School example	The principal is the main administrator and creates accounts for the accountant and two office staff.
Who uses it	Main administrator

1.7 User roles and permissions set-up	Observed in current system
What it does	Defines what each type of user may see and do. Explained in Section 2.
How staff use it	The administrator selects a role for each user and adjusts permissions where needed.
Information recorded or shown	Roles, the modules each role can open, and whether it can only view or also add, edit, delete, print or approve.
What it produces or changes	Staff see only what their job requires.
School example	Teachers can enter marks for their own classes but cannot see fee balances.
Who uses it	Main administrator

1.8 General preferences	Observed in current system
What it does	Day-to-day choices such as message signature, which messaging method is used, and the date format. All configurable rules are described in Section 12.
How staff use it	Set at setup and changed only by authorised administrators.
Information recorded or shown	Preference name, current value, who changed it and when.
What it produces or changes	The system behaves the same way everywhere for that preference.
School example	Every message ends with 'Administration, NNS Secondary School'.
Who uses it	Main administrator

2. Login System and User Permissions

> Every person signs in with their own account. What they can see and do depends on their role, so that private student information and financial records are only visible to people who need them.

Account types

Account type	Typical use	Source
Administrator	Full set-up, users, settings and all modules	Observed
Principal	All academic and administrative information, approvals, reports	Recommended as a separate role
Accounts staff	Fees, receipts, school accounts, salary records	Observed (accountant portal referenced; not inspected)
Teachers	Own classes: attendance, marks, diary, timetable	Observed (teacher access permissions; portal not inspected)
Other staff / front office	Enquiries, visitors, basic student look-up	Observed (help-desk users; portal not inspected)
Parents and students	Own child's notices, fees, attendance, results	Referenced in the audit but NOT inspected - required capability

2.1 Sign in and sign out

Observed in current system

What it does	Lets each user enter the system with their own login name and password and leave safely.
How staff use it	The user enters login details on the sign-in page; a sign-out button is always visible. The session should end automatically after a period of inactivity (recommended).
Information recorded or shown	Login name, time of sign-in, last activity time (the audited dashboard shows 'Last Activity').
What it produces or changes	The user sees only the menu allowed for their role.
School example	An accountant signs out before lunch; the counter computer cannot be used by others to open fee records.
Who uses it	All users

2.2 Change password

Observed in current system

What it does	Lets a signed-in user change their own password by entering the current password and a new one.
How staff use it	Available from the user's profile menu.
Information recorded or shown	Old password (checked, never displayed) and new password.
What it produces or changes	The new password works at the next sign-in.
School example	A teacher who suspects a colleague saw her password changes it immediately.
Who uses it	All users

2.3 Secure password reset	Recommended for new system
What it does	Helps a user who has forgotten their password to set a new one without anyone seeing the old password.
How staff use it	The user requests a reset and receives a one-time code or link on their registered phone or email; or an administrator issues a temporary password that must be changed at next sign-in.
Information recorded or shown	Reset request time, method used and who approved it.
What it produces or changes	A new password set by the user.
School example	A parent forgets the password the evening before results; a reset code arrives by SMS.
Who uses it	All users; administrator for assisted resets

The audited system has a bulk 'retrieve passwords' option. The new system should NOT display users' actual passwords to anyone; it should only allow secure resets.

2.4 Account activation and deactivation	Recommended for new system
What it does	Turns a user's access on or off without deleting their history.
How staff use it	The administrator marks an account inactive, for example when a staff member leaves or a student withdraws.
Information recorded or shown	Account status, date changed and reason.
What it produces or changes	The person can no longer sign in, but their past attendance, salary, marks and records remain intact for reports.
School example	A receptionist resigns on Friday. Her account is deactivated the same afternoon; her visitor-log entries still show her name.
Who uses it	Administrator

2.5 Role-based access	Observed in current system
What it does	Restricts each user to the modules and actions their role needs, and can restrict data, for example to a teacher's own classes.
How staff use it	The administrator assigns a role and fine-tunes permissions. The audited system has separate permission screens for staff access to student information, daily diary, performance analysis and character reports.
Information recorded or shown	Role, allowed modules, allowed actions (view, add, edit, delete, print, approve) and data scope (all classes or assigned classes).
What it produces or changes	Menus and buttons that a user is not allowed to use are hidden.
School example	A Class 4 teacher can enter attendance for Class 4-A only and cannot open the fee defaulter list.
Who uses it	Administrator

2.6 Protection of sensitive information	Observed in current system
What it does	Adds extra protection to financial and personal information.
How staff use it	Sensitive screens (accounts, salaries, balance sheet) require an additional confirmation. The audited system uses a super-admin passcode with lock-out after wrong tries.
Information recorded or shown	Which screens are protected, and who opened them.
What it produces or changes	Unauthorised users cannot view or change money records even on a shared computer.
School example	The office clerk cannot open salary sheets even though she uses the principal's computer.
Who uses it	Administrator, principal

Recommendation: use a personal second check for each user (for example a code sent to their phone) instead of one shared passcode.

2.7 Login history and failed attempts	Observed in current system
What it does	Keeps a record of sign-ins and of wrong or blocked attempts.
How staff use it	The administrator searches by account type and date range.
Information recorded or shown	User, date and time, account type, result (successful, invalid or blocked) and login location. The audited dashboard shows a 'New Location' alert in its logins panel.
What it produces or changes	Early warning of misuse or password guessing; accounts can be locked after repeated failures.
School example	The log shows 15 failed attempts on the accountant's account at night; the administrator resets the password and locks the account.
Who uses it	Administrator

2.8 Activity history (audit trail)	Observed in current system
What it does	Records who did what and when across the system.
How staff use it	Administrators search the history by text and date range.
Information recorded or shown	User, action, record affected, date and time; for changes, the old and new value (recommended).
What it produces or changes	Clear accountability for corrections, deletions and financial changes.
School example	A result was changed after publication; the history shows the user and time of the change.
Who uses it	Administrator, principal

3. Main Dashboard

The dashboard is the first screen an administrator sees after signing in. It brings together the most important numbers and alerts for the selected academic year so the principal can see at a glance what needs attention. This section follows the supplied dashboard screenshot; items not in the screenshot are marked as recommendations.

Layout of the dashboard (from the screenshot)

- Left: a menu of all modules with a search box, the signed-in user's name and photo, links to Profile and Password, and the time of last activity.
- Top: school logo and name, live date and time, the selected academic year (2026-2027), and shortcut icons for messaging, logins, notices and sign-out.
- Below the header: a coloured title bar 'Admin Dashboard' with quick-action icons on the left and icons for alerts, tutorial videos, favourites (quick bar) and settings on the right.
- Main area: summary cards and panels described below, arranged in three columns, followed by a monthly events calendar and the latest circulars.

Dashboard panel	What it tells the administrator	Click action	Source
Total Students card	Number of enrolled students in the selected year (807 in the screenshot)	Opens the student list	Screenshot
Total Parents card	Number of parent/family records (585)	Opens the parent list	Screenshot
Total Staff card	Number of active staff (15)	Opens the staff list	Screenshot
Online Website Forms	Three counters for new online admission enquiries, job applications and feedback	Opens the related inbox	Screenshot
Parents' Complaints	Counters for open, closed and total complaints	Opens the complaints list	Screenshot
Students birthdays	Count of upcoming birthdays (33) with the next few students and days left	Opens the birthday list for wishing	Screenshot
Staff birthdays	Upcoming staff birthdays (1)	Opens the staff birthday list	Screenshot
Tasks List	Shared tasks, with a link to the full list and a button to add a task	Opens or adds a task	Screenshot
Attendance	Whether today's attendance is complete, a 7-day line chart, and today's student and staff statistics	Opens attendance screens	Screenshot
Register	Recent admissions and withdrawals this year (13), newest first	Opens all admissions and withdrawals	Screenshot
Logins	Login statistics chart and a 'New Location' alert	Opens login history	Screenshot
Visitors	Number of visitors for today	Opens the visitor log	Screenshot
Campus Events Calendar	Month view of school events with today highlighted	Opens or adds events	Screenshot
Latest Circulars	Most recent notices	Opens all circulars	Screenshot

3.1 Key totals: students, parents and staff	Shown in dashboard screenshot
What it does	Three large cards showing total students, total parents/families and total staff.
How staff use it	The principal reads them on arrival; 'More info' opens the full list.
Information recorded or shown	Counts for the selected academic year. Recommended: a breakdown of students by gender (the audited student list already shows boys and girls separately).
What it produces or changes	A quick check of school size and any sudden change.
School example	Total students drop from 812 to 807 in a week; the principal opens the register to see the five withdrawals.
Who uses it	Administrator, principal

3.2 Online website forms counters	Shown in dashboard screenshot
What it does	Shows how many new admission enquiries, job applications and feedback messages arrived from the school website and are still unread.
How staff use it	The administrator clicks a counter to open that inbox and follow up.
Information recorded or shown	Unread count per form type.
What it produces or changes	No online enquiry is missed.
School example	The admission counter shows 3; the front office calls the three families the same morning.
Who uses it	Administrator, admission office

3.3 Parent complaints summary	Shown in dashboard screenshot
What it does	Shows open, closed and total complaints.
How staff use it	Clicking opens the complaint list filtered by status.
Information recorded or shown	Complaint counts by status for the year.
What it produces or changes	Unresolved complaints stay visible until closed.
School example	Two complaints are open for more than five days; the principal assigns them to the coordinator.
Who uses it	Principal

3.4 Student and staff birthdays	Shown in dashboard screenshot
What it does	Lists upcoming birthdays with photos and days remaining.
How staff use it	Staff open 'View All Birthdays' to send wishes or print cards.
Information recorded or shown	Name, class or designation, birthday date and days left.
What it produces or changes	Families and staff feel valued; wishes are sent on time.
School example	Three students have birthdays this week; a wish message is sent to each parent on the day.
Who uses it	Office

3.5 Task list	Shown in dashboard screenshot
What it does	Shows the shared to-do list with deadlines and priorities.
How staff use it	Users add a task, share it with colleagues and mark it complete.
Information recorded or shown	Task description, deadline, priority (normal or urgent), status, people it is shared with, completion date.
What it produces or changes	Overdue and urgent tasks are visible to everyone involved.
School example	'Submit board registration forms' is marked urgent with a deadline of Friday.
Who uses it	Principal, coordinators, office

3.6 Attendance status and charts	Shown in dashboard screenshot
What it does	Shows whether today's attendance has been completed, a line chart of the last seven days, and today's student and staff figures (present, absent, leave, late and similar).
How staff use it	The administrator checks the status each morning and opens the class list if any register is missing.
Information recorded or shown	Daily attendance totals for students and staff; completion status; a badge for students with repeated absences.
What it produces or changes	Missing registers and attendance problems are noticed early.
School example	The status shows 'Incomplete'; the principal sees Class 6-B has not been marked and reminds the class teacher.
Who uses it	Principal, administrator

3.7 Recent admissions and withdrawals (register)	Shown in dashboard screenshot
What it does	Lists the latest admissions and withdrawals of the current year.
How staff use it	The administrator scrolls the list or opens 'All Admissions & Withdrawals'.
Information recorded or shown	Student number, name, class, whether admitted or left, and how many days ago.
What it produces or changes	Follow-up such as welcome messages, fee settlement or leaving certificates is not forgotten.
School example	A Class 9 student who left six days ago still needs a leaving certificate; the office prints it.
Who uses it	Administrator, office

3.8 Logins panel	Shown in dashboard screenshot
What it does	Shows a chart of logins by user type and flags sign-ins from a new location.
How staff use it	The administrator clicks the panel to open login history.
Information recorded or shown	Logins by type; new-location alerts.
What it produces or changes	Unusual access is noticed.
School example	A 'New Location' alert appears for the accountant's account; the administrator confirms it was the accountant working from home.
Who uses it	Administrator

3.9 Visitors summary	Shown in dashboard screenshot
What it does	Shows how many visitors were recorded today.
How staff use it	Opens the visitor log for details.
Information recorded or shown	Visitor count for the date.
What it produces or changes	Awareness of who is on campus.
School example	Zero visitors recorded by 11 am although the guard reported two; the front office updates the log.
Who uses it	Principal, front office

3.10 Campus events calendar	Shown in dashboard screenshot
What it does	Month calendar of school events, with buttons to move between months and return to today.
How staff use it	Click a date or event to view details; authorised users add events.
Information recorded or shown	Event title, date, duration and type (school event, public holiday, examination and so on).
What it produces or changes	Everyone plans around the same calendar.
School example	Sports Day on 15 December shows on the calendar for all staff.
Who uses it	All admin users

3.11 Latest circulars	Shown in dashboard screenshot
What it does	Shows the newest notices/circulars.
How staff use it	Click 'View All Circulars' to read or post notices.
Information recorded or shown	Circular title and date.
What it produces or changes	Recent announcements are easy to find.
School example	The winter-timing circular appears at the top for one week.
Who uses it	All admin users

3.12 Quick links and alerts bar	Shown in dashboard screenshot
What it does	Icons for frequently used actions, a quick bar of favourite pages, tutorial videos, settings and an alert icon.
How staff use it	Users click an icon instead of searching the menu.
Information recorded or shown	Favourite pages per user.
What it produces or changes	Faster daily work.
School example	The accountant pins 'Fee Defaulters' to the quick bar.
Who uses it	All admin users

3.13 Urgent-matters highlight

Recommended for new system

What it does	A short, prioritised list of items that need action today, without cluttering the screen.
How staff use it	Appears at the top only when something is pending; each line links to the relevant screen.
Information recorded or shown	Attendance not entered, enquiries pending follow-up for more than a set number of days, fee follow-ups overdue, complaints unresolved beyond a set time, overdue tasks.
What it produces or changes	The principal sees at most five urgent lines in order of importance.
School example	'Class 3-A attendance not entered (9:15 am)'; 'Two complaints open more than 7 days'.
Who uses it	Principal, administrator

Recommendation: the dashboard should show only the panels a user's role allows. For example, an accountant may see fee collection totals, while a teacher sees only their classes' attendance status. Sensitive totals can be hidden when the screen is visible to visitors (the audited system has a setting to mask dashboard figures).

4. New Student Admission

Admission covers the full journey from a family's first enquiry to a fully enrolled student with a class, a family record and a fee plan. Information is entered once and carried forward, so staff never retype the same details.

Admission journey at a glance

Step	What happens	Result
1. Enquiry	Front office records the child, parent and class applied for	Enquiry with status 'New Enquiry'
2. Follow-up	Calls, visits, test or interview if the school uses them	Status 'Follow-up Needed'; remarks history
3. Decision	Principal or admission officer approves or declines	'Admission Approved' or 'Not Proceeding'
4. Enrolment	Enquiry converted to a student; GR number, class, section and family link assigned	Status 'Enrolled'; student record created
5. Initial charges	Admission fee and first month's charges applied	First fee bill ready

4.1 Record a new enquiry — Observed in current system

What it does	Captures a family's interest in admission, whether they visit, phone or apply online.
How staff use it	The front office clicks 'Add Enquiry' and fills in the form. Online enquiries from the website arrive in the same list.
Information recorded or shown	Enquiry date, registration number, child's name, gender, date of birth (age calculated automatically), class applied for, parent name and phone, address, previous school and remarks.
What it produces or changes	A new enquiry with status 'New Enquiry'.
School example	A mother phones about Class 3 for her son; the receptionist records the call in two minutes.
Who uses it	Front office, admission office

4.2 Enquiry statuses — Observed in current system

What it does	Shows where each family is in the process.
How staff use it	Staff change the status after each contact. The school can define its own statuses with colours.
Information recorded or shown	Status name and colour. Recommended standard set: New Enquiry, Follow-up Needed, Admission Approved, Not Proceeding, Enrolled. The audited system uses statuses such as Enquiry Pending, Follow Up Pending and Admission Confirmed.
What it produces or changes	Lists can be filtered by status; pending follow-ups are easy to find.
School example	All 'Follow-up Needed' enquiries older than three days appear on the dashboard alert.
Who uses it	Admission office

4.3 Follow-up remarks and messages	Observed in current system
What it does	Keeps the history of each contact and lets staff send messages to families.
How staff use it	Staff add a remark after each call. They can send an SMS to selected enquiries in English or Urdu.
Information recorded or shown	Remark text, date, staff name; message sent and date.
What it produces or changes	A complete history any staff member can read.
School example	'Called 12 March - father will visit Saturday.' A reminder SMS goes to all Class 1 enquiries about the test date.
Who uses it	Admission office

4.4 Entry test or interview outcome	Observed in current system
What it does	Records the result of an entry test or interview, only if the school uses one.
How staff use it	Staff enter the marks obtained and total marks, or an interview remark.
Information recorded or shown	Test date, obtained marks, total marks, outcome. The audited system shows entry test marks in the enquiry list and a test syllabus per class.
What it produces or changes	The admission decision is based on recorded results.
School example	A child scores 42/50; the principal approves admission to Class 4.
Who uses it	Admission office, principal

4.5 Search and avoid duplicates	Recommended for new system
What it does	Prevents the same child or family being entered twice.
How staff use it	When a name, date of birth or parent phone/CNIC is typed, the system shows matching existing enquiries, students and families and asks the user to confirm.
Information recorded or shown	Possible matches with key details.
What it produces or changes	Staff link to the existing family or enquiry instead of creating a duplicate.
School example	A father who enquired last year returns; the system finds his old enquiry by phone number.
Who uses it	Front office

4.6 Convert an approved enquiry into a student	Recommended for new system
What it does	Creates the student record from the enquiry without retyping.
How staff use it	The admission officer clicks 'Enrol' on an approved enquiry; the admission form opens already filled with enquiry details.
Information recorded or shown	All enquiry details carried forward; status changed to 'Enrolled'.
What it produces or changes	A new student record linked back to the original enquiry.
School example	Twenty approved Play Group enquiries are enrolled on the first day of admissions.
Who uses it	Admission office

4.7 Admission form	Observed in current system
What it does	Completes the student's full record at enrolment.
How staff use it	The officer completes or checks each field and saves.
Information recorded or shown	GR (registration) number - the system suggests the next available number; name, gender, date and place of birth, B-Form number, religion, nationality, phone, address, admission date, class and section, first class admitted to, previous school, study group, seat number, transport route if used, photo and up to three documents, notes.
What it produces or changes	An enrolled student who appears in class lists, attendance registers and fee billing.
School example	Ayesha is admitted to Class 2-B on 3 April with GR number 2553; her B-Form copy and photo are attached.
Who uses it	Admission office

4.8 Link the parent/family record	Observed in current system
What it does	Connects the student to their family (Section 8).
How staff use it	On the admission form the officer selects an existing family or adds a new one.
Information recorded or shown	Parent/guardian name, CNIC, phone, profession, email, address, mother's details, guardian details.
What it produces or changes	Siblings share one family; fee ledgers and messages can be combined by family.
School example	A new Class 1 student is linked to the family of his sister in Class 5.
Who uses it	Admission office

4.9 Documents and photo	Observed in current system
What it does	Stores the student's photo and scanned documents.
How staff use it	Upload during admission or later.
Information recorded or shown	Photo, B-Form/birth certificate, previous school certificate, other documents.
What it produces or changes	Documents available for board registration, ID cards and certificates.
School example	The school leaving certificate from the previous school is uploaded on admission day.
Who uses it	Admission office

4.10 Admission fee and initial charges	Recommended for new system
What it does	Applies the admission fee and other first-time charges as soon as a student is enrolled.
How staff use it	On enrolment the system proposes the charges defined for that class; the officer confirms or adjusts with permission.
Information recorded or shown	Fee heads applied, amounts, discounts approved.
What it produces or changes	A first fee bill ready to print or send.
School example	Admission fee Rs. 5,000 and April tuition are billed immediately after enrolment.
Who uses it	Admission office, accounts staff

4.11 Admission terms, syllabus and printable form	Observed in current system
What it does	Provides the admission terms & conditions, entry-test syllabus by class and a printable admission form.
How staff use it	Office prints or shares them with families.
Information recorded or shown	Terms text, syllabus outline per class, form layout with school heading.
What it produces or changes	Families receive consistent information.
School example	The Class 6 test syllabus is printed and handed to families at enquiry.
Who uses it	Admission office

4.12 Welcome message	Observed in current system
What it does	Sends a welcome message or prints a welcome card for a newly admitted student.
How staff use it	Triggered from the new-admissions list.
Information recorded or shown	Message template and date sent.
What it produces or changes	Family receives a welcome and first-day information.
School example	'Welcome to NNS! School starts at 7:45 am.'
Who uses it	Office

5. Student Management

> The student record is the centre of the system. Fees, attendance, marks, report cards and parent details all connect to the same student profile, which stays complete from admission to leaving and beyond.

What is connected to each student

Connected item	Where it is managed
Family / parents	Section 8
Class and section for each academic year	Section 9
Fee account: bills, payments, balance	Section 10
Attendance register	Section 13
Marks, report cards and results	Section 14
Weekly and monthly reports	Section 15

5.1 Student profile	Observed in current system
What it does	A single page with everything about a student.
How staff use it	Authorised staff open it from any list by clicking the student's name.
Information recorded or shown	GR number, name, photo, date of birth, gender, contact and address, family link, admission date, class, section, academic year, status (active, left), previous school, documents, notes. Recommended: tabs for fees, attendance, results and remarks.
What it produces or changes	A complete picture without visiting several screens.
School example	At a parent meeting the principal opens one profile and sees attendance, marks and fee status together.
Who uses it	Administrator, principal; others as permitted

5.2 Find a student quickly	Observed in current system
What it does	Search by GR number, name, parent name or phone; list by class, several classes or the whole school.
How staff use it	Type in the search box or choose a class.
Information recorded or shown	Matching students with class and photo; class strength summary (total, boys, girls).
What it produces or changes	Any student found in seconds.
School example	A parent at the gate gives only the father's name; the office finds the student by parent name.
Who uses it	All admin users

5.3 Update student details	Observed in current system
What it does	Corrects or updates student information.
How staff use it	Open the profile and click Edit. Bulk changes are available for one field across many students, such as seat numbers or dates of birth.
Information recorded or shown	Changed fields; history of changes (recommended).
What it produces or changes	Correct information everywhere the student appears.
School example	Board seat numbers are entered for all Class 10 students in one screen.
Who uses it	Office

5.4 Move to another class or section	Recommended for new system
What it does	Transfers a student between sections or classes during the year.
How staff use it	Choose the new class/section and the effective date.
Information recorded or shown	Old and new class/section, date, reason.
What it produces or changes	Attendance and results before the date stay with the old class; new entries go to the new class.
School example	A student moves from 7-A to 7-B on 1 November to balance class sizes.
Who uses it	Office

5.5 Promotion to the next academic year	Recommended for new system
What it does	Moves students to their next class when a new year opens.
How staff use it	The administrator selects a class, reviews the list, marks students who are promoted, repeat the class or leave, and confirms.
Information recorded or shown	Promotion decision per student.
What it produces or changes	Students appear in the new class in the new year; last year's class and results stay unchanged in history.
School example	All Class 5 students except two are promoted to Class 6.
Who uses it	Administrator, principal

5.6 Withdrawal or leaving	Observed in current system
What it does	Records that a student has left.
How staff use it	Office enters the leaving date and reason; fee balance is checked first.
Information recorded or shown	Withdrawal date, reason, outstanding balance.
What it produces or changes	Student becomes inactive; appears in the leavers list and on the dashboard register. Unpaid amounts can be recorded as bad debt.
School example	A family moves to another city; the student is withdrawn and a leaving certificate is printed.
Who uses it	Office, accounts

5.7 Leavers and historical records	Observed in current system
What it does	Keeps records of former students across all years.
How staff use it	Search the leavers list.
Information recorded or shown	All past details, attendance, results and fees.
What it produces or changes	Certificates and verifications possible years later.
School example	A former student asks for a character certificate three years after leaving.
Who uses it	Office

5.8 ID cards and certificates	Observed in current system
What it does	Prints student ID cards and certificates from the student record.
How staff use it	Select students or a class and a design.
Information recorded or shown	ID card designs; certificate types observed: leaving, date of birth, character, appreciation, provisional (board result), hope.
What it produces or changes	Printed documents with school heading and signatures.
School example	ID cards for all new students are printed in April.
Who uses it	Office

5.9 Printable records	Observed in current system
What it does	Bio-data sheets, student summary tables and admission/withdrawal registers.
How staff use it	Choose class and print.
Information recorded or shown	Student details in a print layout.
What it produces or changes	Paper records for files and inspections.
School example	A summary of class strength is printed for an inspection visit.
Who uses it	Office, principal

5.10 Student activities	Observed in current system
What it does	Records houses, clubs and achievements ('shining stars').
How staff use it	Allocate students to houses/clubs; record achievements.
Information recorded or shown	House, club, role, achievement description.
What it produces or changes	Records for co-curricular reports.
School example	A student who won a district quiz is added to shining stars.
Who uses it	Teachers, coordinators

5.11 Privacy of student information	Recommended for new system
What it does	Hides sensitive details from users without permission.
How staff use it	Permissions decide who sees fees, documents and contact numbers.
Information recorded or shown	Permission per role.
What it produces or changes	Teachers see academic information; fee details only for authorised staff.
School example	A subject teacher can view a student's attendance but not the family's fee balance.
Who uses it	Administrator

6. Teacher Management

Teacher records hold each teacher's personal and employment details and their teaching assignments. They connect to attendance, leave, timetable and salary records.

6.1 Teacher record	Observed in current system
What it does	Stores each teacher's personal and job information.
How staff use it	The office adds a teacher on joining and keeps the record up to date.
Information recorded or shown	Employee ID, name, father/husband name, photo, phone, email, address, CNIC, date of birth, qualification, experience, joining date, designation, category (teacher), employment type (permanent or contract), status, documents, notes.
What it produces or changes	Teacher appears in class assignments, attendance and payroll.
School example	A new Science teacher joins on 1 August; her degree copy and CNIC are uploaded.
Who uses it	Office, principal

6.2 Login account for teachers	Observed in current system
What it does	Gives each teacher their own access.
How staff use it	Created with the teacher record; permissions set by role.
Information recorded or shown	Login name, role, allowed classes and modules.
What it produces or changes	Teachers can mark attendance, enter marks and post diary entries for their classes.
School example	The Class 3 teacher signs in and sees only Class 3.
Who uses it	Administrator

6.3 Assign classes and subjects	Observed in current system
What it does	Records which teacher teaches which subject in which class/section, and who is the class teacher.
How staff use it	The administrator assigns the class teacher in the class settings and subject teachers through the timetable or a teaching-assignment list (recommended).
Information recorded or shown	Teacher, class, section, subject.
What it produces or changes	Teachers can only enter marks and attendance for assigned classes; reports show each teacher's load.
School example	Mr. Ahmed teaches Mathematics in 8-A and 8-B and is class teacher of 8-A.
Who uses it	Administrator, coordinator

6.4 Teacher timetable	Observed in current system
What it does	Shows each teacher's periods during the week, if the school maintains a timetable.
How staff use it	Open the teacher's timetable or print it.
Information recorded or shown	Day, period, class, subject.
What it produces or changes	A personal timetable for each teacher; substitution planning when a teacher is absent.
School example	A teacher on leave: the coordinator sees her six periods and arranges substitutes.
Who uses it	Coordinator, teachers

6.5 Attendance and leave	Observed in current system
What it does	Shows the teacher's attendance and leave history (details in Section 13).
How staff use it	Viewed from the teacher profile or attendance reports.
Information recorded or shown	Present, absent, late, leave days; leave applications and status.
What it produces or changes	Data for appraisals and payroll.
School example	Before an appraisal the principal reviews late arrivals for the term.
Who uses it	Principal

6.6 Assignment changes	Observed in current system
What it does	Handles changes when a teacher's subjects or classes change.
How staff use it	The coordinator reassigns classes; a bulk change can move all periods from one teacher to another.
Information recorded or shown	Old and new assignment, effective date.
What it produces or changes	Past records remain linked to the teacher who taught at the time.
School example	A teacher on maternity leave: her classes move to a replacement from 1 December.
Who uses it	Coordinator

6.7 Teacher leaving	Observed in current system
What it does	Records that a teacher has left.
How staff use it	Enter leaving date; deactivate login.
Information recorded or shown	Leaving date, reason.
What it produces or changes	Teacher removed from active lists and timetables; history kept; experience certificate can be printed.
School example	A teacher resigns in June; her past attendance and salary history remain.
Who uses it	Office, administrator

6.8 Connection to salary	Observed in current system
What it does	Teacher records provide salary details to payroll.
How staff use it	Salary fields maintained in the record; calculations happen in payroll/accounts.
Information recorded or shown	Starting salary, current salary, increments, bank account, per-lecture rate where used.
What it produces or changes	Monthly salary uses the correct basic salary and attendance.
School example	An increment recorded in July changes the August salary.
Who uses it	Accounts staff

7. Other Staff Management

Non-teaching employees are recorded separately from teachers because their duties, permissions and attendance times differ. The school records only the roles it actually employs.

7.1 Non-teaching staff record	Observed in current system
What it does	Stores each non-teaching employee's details.
How staff use it	The office adds staff on joining. In the audited system staff are classified as 'Teacher' or 'Other Staff'.
Information recorded or shown	Employee ID, name, photo, phone, address, CNIC, designation (for example office assistant, accountant, receptionist, helper, security guard, driver), joining date, employment type, status, documents.
What it produces or changes	Staff appear in attendance and payroll.
School example	A new security guard is added with his CNIC copy and night-shift designation.
Who uses it	Office

7.2 Login and permissions for staff	Observed in current system
What it does	Gives login access only to staff who need it, with permissions matching the job.
How staff use it	Accountant and front-office staff receive limited accounts; helpers usually do not need a login.
Information recorded or shown	Role and allowed modules.
What it produces or changes	The accountant sees fees and accounts; the receptionist sees enquiries and visitors.
School example	The receptionist can add enquiries but cannot open salary records.
Who uses it	Administrator

7.3 Attendance and leave	Observed in current system
What it does	Daily attendance, late arrival and leave for non-teaching staff, using their own start time.
How staff use it	Marked by the office (Section 13).
Information recorded or shown	Daily status and leave records. The audited system has separate late-arrival times for teaching and other staff.
What it produces or changes	Monthly summaries for payroll.
School example	Support staff start at 7:00 am; arrival at 7:20 is marked late.
Who uses it	Office

7.4 Inactive staff and history	Observed in current system
What it does	Makes a staff member inactive when they leave while keeping records.
How staff use it	Enter leaving date; deactivate login.
Information recorded or shown	Leaving date, reason.
What it produces or changes	Attendance and salary history remain for reports and certificates.
School example	A driver leaves in May; his salary records for the year stay available for audit.
Who uses it	Office

8. Parent & Family Management

One family record connects a parent or guardian to all their children at the school. Contact details are kept in one place so updates reach every sibling's record, and the family can receive messages, bills and results.

8.1 Family record	Observed in current system
What it does	Holds the family's details and links all children.
How staff use it	Created during admission or separately; opened from any child's profile.
Information recorded or shown	Family ID, father/parent name, CNIC, phone, profession, email, address, mother's name and phone, guardian's name and phone, relationship to the student, remarks. Recommended: emergency contact and preferred communication method.
What it produces or changes	Siblings grouped under one family.
School example	A family with three children has one record; the father's new number is updated once.
Who uses it	Office

8.2 Find all siblings	Observed in current system
What it does	Shows every child linked to a family.
How staff use it	Search by Family ID, parent name, phone or CNIC.
Information recorded or shown	Children's names and classes.
What it produces or changes	Family-level fee ledgers, discounts and meetings.
School example	Before a fee meeting the accountant opens the family and sees all three children's balances.
Who uses it	Office, accounts

8.3 Separate guardians	Recommended for new system
What it does	Handles cases where a child lives with a guardian or parents are separated.
How staff use it	Add a guardian with relationship and contact permissions to a specific child.
Information recorded or shown	Guardian details, relationship, who may collect the child and who receives messages.
What it produces or changes	Messages and reports reach the right person.
School example	A child lives with the grandmother; she receives attendance messages, the father receives fee bills.
Who uses it	Office

8.4 Safe updates	Recommended for new system
What it does	Updates family contact details without accidentally changing unrelated records.
How staff use it	Editing the family updates all linked children; changing one child's family link asks for confirmation.
Information recorded or shown	Old and new value, user and date.
What it produces or changes	Correct contacts for all siblings.
School example	The mother's phone is changed once and used for all three children.
Who uses it	Office

8.5 Bulk family updates and data checks	Observed in current system
What it does	Updates phones, CNICs or names for many families and finds incomplete records.
How staff use it	Use bulk change or data-quality reports (invalid phones, missing CNICs, families with no children).
Information recorded or shown	Field to change; list of problem records.
What it produces or changes	Cleaner, reliable contact data.
School example	Fifty families missing CNIC are updated after a form drive.
Who uses it	Office

8.6 Communication with families	Observed in current system
What it does	Sends notices, fee reminders, payment receipts, attendance information and results.
How staff use it	Messages go by SMS, WhatsApp or mobile-app notification, according to what the school uses.
Information recorded or shown	Message, recipients, date and delivery log.
What it produces or changes	Parents stay informed.
School example	Payment receipt SMS: 'Received Rs. 3,500 for October fee.'
Who uses it	Office, accounts

8.7 Parent portal or app access	In current system - NOT confirmed
What it does	Lets parents sign in to see their children's notices, fees, attendance and results.
How staff use it	Parents sign in with their own account.
Information recorded or shown	Only their own children's information.
What it produces or changes	Fewer calls to the office.
School example	A father checks his daughter's term result on his phone.
Who uses it	Parents

> The audited system refers to a parent portal and mobile app, but these were NOT inspected. Parent access is described here as a required capability of the new system.

9. Classes, Sections & Subjects Management

The academic structure is set up before students, timetables and exams. Classes contain sections, and each class has its own subjects with maximum marks.

9.1 Academic years	Observed in current system
What it does	The year under which classes and students are organised (see Section 1).
How staff use it	Created by the administrator.
Information recorded or shown	Year name, dates, status.
What it produces or changes	Each year's class lists are kept separately.
School example	2026-2027 is open; 2025-2026 is closed.
Who uses it	Administrator

9.2 Classes (grades)	Observed in current system
What it does	Creates the list of classes.
How staff use it	Add, edit, reorder and deactivate classes.
Information recorded or shown	Class name, short name, display order, status, grading system (marks or grades), class teacher.
What it produces or changes	Classes available in admission, attendance, fees and exams.
School example	Play Group, Nursery and Prep use grades; Class 1 to 10 use marks.
Who uses it	Administrator

9.3 Sections	Observed in current system
What it does	Divides a class into sections.
How staff use it	Add or edit sections under each class.
Information recorded or shown	Section name, class, class teacher (recommended at section level).
What it produces or changes	Students, attendance and timetables per section.
School example	Class 8 has sections A and B with different class teachers.
Who uses it	Administrator

9.4 Subjects and maximum marks	Observed in current system
What it does	Defines subjects for each class and their total (maximum) marks.
How staff use it	Choose a class and add subjects with marks; passing marks recommended.
Information recorded or shown	Subject name, short name, maximum marks, passing marks, order.
What it produces or changes	Subjects appear in marks entry, report cards and timetables.
School example	Class 6: English 100, Urdu 100, Mathematics 100, Science 75.
Who uses it	Administrator, exam coordinator

9.5 Assign class teacher and subject teachers	Observed in current system
What it does	Connects teachers to classes and subjects (see Section 6).
How staff use it	Select the teacher in class settings and teaching assignments.
Information recorded or shown	Teacher per class/section/subject.
What it produces or changes	Permissions and reports follow the assignment.
School example	The Class 4 class teacher is responsible for daily attendance.
Who uses it	Administrator

9.6 Effect of class and section changes	Recommended for new system
What it does	Explains how changes affect lists and reports.
How staff use it	Renaming a class changes its name everywhere; moving students changes lists from the effective date.
Information recorded or shown	Change history.
What it produces or changes	Reports for past dates still show the class the student was in at the time.
School example	A section is merged mid-year; attendance before the merge still reports under the old section.
Who uses it	Administrator

9.7 Deletion safeguards	Observed in current system
What it does	Prevents deleting a class, section or subject that is already used.
How staff use it	Before deletion the system checks whether students, attendance, fees or marks use it. The audited system has 'check used' screens for subjects, exams and classes.
Information recorded or shown	Where the item is used.
What it produces or changes	Used items can only be deactivated, not deleted.
School example	'Drawing' cannot be deleted because it has marks in two exams; it is deactivated for next year.
Who uses it	Administrator

10. Fee System and Fee Types

> The fee system lets the school charge different fee heads on different schedules, bill students and families, record full or partial payments, issue receipts, and follow up outstanding balances. Every rupee is traceable to a student or family, a fee head, a date, a receipt and the staff member who recorded it.

Three key ideas: charge, payment and balance

Term	Meaning	Example
Charge (bill / invoice)	An amount the school asks the family to pay for a fee head and period	October tuition fee Rs. 3,500
Payment (receipt)	Money actually received from the family, fully or partly against charges	Mother pays Rs. 2,000 on 5 October
Outstanding balance	Charges minus discounts minus payments	Rs. 1,500 still due

Fee heads (fee types)

The school defines its own list of fee heads, renames them and switches them on or off. No fee head is compulsory. The audited system's fee categories include Tuition Fee, Admission Fee, Annual Fund, Transport Charges, Lab Charges, Absent Fine and Miscellaneous Charges; each has a frequency, maximum fee, display order and class-wise amounts.

Fee head	Typical schedule	Source
Admission / registration fee	One-time at enrolment	Observed (Admission Fee)
Monthly tuition fee	Monthly	Observed (Tuition Fee)
Annual / yearly fund	Once a year	Observed (Annual Fund)
Annual charges	Once a year	Recommended
Examination fee	Per term or per exam	Recommended
Activity / event fee	Per event	Recommended
Laboratory fee	Monthly or yearly	Observed (Lab Charges)
Library / computer fee	Monthly or yearly	Recommended
Security deposit (refundable)	One-time, refundable on leaving	Recommended
Transport fee (only if the school provides transport)	Monthly	Observed (Transport Charges)
Late-payment fine	When paid after due date	Observed (late fee)
Absent-related fine (only if policy allows)	Based on attendance	Observed (Absent Fine)
Other one-time charges	As needed	Observed (Miscellaneous Charges)
Other school-defined charges	School decides	Recommended

10.1 Fee head set-up	Observed in current system
What it does	Creates and controls the list of fee heads.
How staff use it	The administrator or accountant adds a head, sets its schedule and order, and switches it on or off.
Information recorded or shown	Name, frequency (monthly, yearly, one-time, custom), maximum amount, order, active status.
What it produces or changes	Fee heads available for billing.
School example	The school adds 'Computer Fee' from April and stops 'Lab Charges' for primary classes.
Who uses it	Accounts staff, administrator

10.2 Fee amounts by class, student or family	Observed in current system
What it does	Sets the amount for each fee head per class, with exceptions for individual students or families.
How staff use it	Enter class-wise amounts; apply a student-level amount or discount where needed.
Information recorded or shown	Fee head, class, amount, effective academic year; student exceptions.
What it produces or changes	Correct amounts are used when bills are generated. The audited system shows class-wise fee amounts and flags classes with missing amounts.
School example	Class 1-5 tuition Rs. 3,000; Class 6-8 Rs. 3,500; Class 9-10 Rs. 4,200.
Who uses it	Accounts staff

10.3 Discounts, scholarships and concessions	Observed in current system
What it does	Reduces the amount a student pays for a fee head.
How staff use it	Accountant adds a discount (amount or percentage) with remarks; approval by the principal is recommended for new or large discounts.
Information recorded or shown	Student, fee head, normal amount, discount, amount to charge, percentage, reason/remarks, approved by.
What it produces or changes	Bills automatically apply the discount. The audited system can list students who should have a discount but do not.
School example	Staff children receive 50% tuition discount; a merit scholarship gives 100% for one year.
Who uses it	Accounts staff, principal

10.4 Sibling discount	Recommended for new system
What it does	Automatic discount for the second, third or later child of the same family.
How staff use it	Rule set once (for example 10% for the second child, 20% for the third); applied by family link.
Information recorded or shown	Family, order of children, discount rule.
What it produces or changes	Correct sibling discount without manual entry.
School example	When a third child is admitted, her tuition is reduced by 20% automatically.
Who uses it	Accounts staff

10.5 Generate fee bills (invoices)	Observed in current system
What it does	Creates bills for a period.
How staff use it	Choose fee head(s), month or period, and who to bill: one student, a family, a class, several classes, or selected students; exclude students where needed.
Information recorded or shown	Bill title, date, month, fee head, amount, discount, advance adjustment.
What it produces or changes	Bills appear in each student's fee account and are ready for vouchers.
School example	October tuition bills for the whole school are generated on 25 September.
Who uses it	Accounts staff

10.6 Fee vouchers	Observed in current system
What it does	Prints vouchers families use to pay at the school or bank.
How staff use it	Select class or students, issue date, due date, validity date and late fee; print.
Information recorded or shown	Student and family details, fee heads, arrears (can be hidden), total due, due date, late fee after due date, bank details.
What it produces or changes	Printed vouchers; the voucher format follows school settings.
School example	November vouchers for Classes 1-10 are printed and sent home on 25 October.
Who uses it	Accounts staff

10.7 Record full or partial payments	Observed in current system
What it does	Records money received against one or more bills.
How staff use it	The accountant finds the student or family, enters the amount, payment date and method, and saves.
Information recorded or shown	Amount, payment date, method (cash or bank in the audited system; others recommended), account received into, receipt number, staff member.
What it produces or changes	Bill status becomes paid or partly paid; the balance is updated; the cash or bank account balance increases.
School example	A father pays Rs. 5,000 against a Rs. 7,000 bill; Rs. 2,000 remains due.
Who uses it	Accounts staff

10.8 Receipts	Observed in current system
What it does	Proof of payment for the family.
How staff use it	Printed immediately or sent by SMS.
Information recorded or shown	Receipt number, date, student/family, fee heads paid, amount, method, received by.
What it produces or changes	Printed receipt and/or SMS receipt.
School example	Receipt SMS sent the moment payment is saved.
Who uses it	Accounts staff

10.9 Family payments	Observed in current system
What it does	Takes one payment for several siblings.
How staff use it	Open the family ledger and receive in bulk.
Information recorded or shown	Family ID, children, bills, amount allocated to each.
What it produces or changes	One receipt; each child's balance updated.
School example	A mother pays for three children in one transaction.
Who uses it	Accounts staff

10.10 Advance payments and carry-forward	Observed in current system
What it does	Records money paid before it is due and carries unpaid amounts to the next bill.
How staff use it	Mark a payment as advance; arrears are shown on the next voucher.
Information recorded or shown	Advance amount, months covered, arrears.
What it produces or changes	Future bills are adjusted automatically.
School example	A family pays three months in advance before travelling abroad.
Who uses it	Accounts staff

10.11 Late fee	Observed in current system
What it does	Adds a late-payment fine according to school rules.
How staff use it	Applied to unpaid bills after the due date for chosen classes, with exclusions.
Information recorded or shown	Late fee amount, date applied, bills affected.
What it produces or changes	A late-fee charge added to the student's account.
School example	Rs. 200 late fee added on the 11th to unpaid October bills.
Who uses it	Accounts staff

10.12 Absent fine (only if school policy allows)	Observed in current system
What it does	Charges a fine linked to unexplained absences.
How staff use it	Choose attendance month and amount; the system counts absences.
Information recorded or shown	Month, amount per absence, students affected.
What it produces or changes	Fine added to the next bill.
School example	Rs. 50 per unexplained absence added for October.
Who uses it	Accounts staff

10.13 Adjustments and corrections	Observed in current system
What it does	Corrects billing mistakes in a controlled way.
How staff use it	Authorised staff reverse or adjust a bill with a reason; the audited system lists bills with negative balances for correction.
Information recorded or shown	Original amount, adjustment, reason, approved by.
What it produces or changes	Correct balance with a full history.
School example	A student was billed transport by mistake; the charge is reversed with the reason recorded.
Who uses it	Accounts staff, principal

10.14 Student and family fee ledgers	Observed in current system
What it does	Shows the full history of charges, discounts, payments and balance.
How staff use it	Open from the student or family.
Information recorded or shown	Date, fee head, month, amount, discount, paid, due, status.
What it produces or changes	Clear answer to 'what do we owe and why?'
School example	A father questions Rs. 3,000; the ledger shows two unpaid months.
Who uses it	Accounts staff

10.15 Fee status views	Observed in current system
What it does	Shows paid, unpaid, partly paid and overdue fees.
How staff use it	Filter bills by class, month and status.
Information recorded or shown	Status per bill.
What it produces or changes	Focused follow-up.
School example	List of overdue Class 9 bills for September.
Who uses it	Accounts staff

10.16 Fee reminders and defaulters	Observed in current system
What it does	Identifies families with overdue balances and reminds them.
How staff use it	Open the defaulter list, filter by class or minimum amount, send SMS/WhatsApp reminders, print or send final reminder letters, and record follow-up remarks.
Information recorded or shown	Amount due, last payment date, days overdue, parent and mother phone, follow-up remarks.
What it produces or changes	Reminders sent and follow-up history recorded.
School example	Families owing over Rs. 10,000 receive a final reminder letter in Urdu.
Who uses it	Accounts staff, principal

10.17 Fee reports	Observed in current system
What it does	Collection and outstanding reports.
How staff use it	Choose date range, class and fee heads.
Information recorded or shown	Fee-head-wise charged, paid and recoverable amounts; family-wise month-by-month receivables; recent payments; bad debts of students who left.
What it produces or changes	Printable and exportable reports.
School example	The owner receives monthly collection by fee head.
Who uses it	Accounts staff, principal

10.18 Traceability of every payment	Recommended for new system
What it does	Ensures every payment can be traced.
How staff use it	Automatic.
Information recorded or shown	Student/family, fee head, date, amount, receipt number, method, account and responsible user.
What it produces or changes	No payment can be recorded or changed without a trace.
School example	An auditor checks a receipt and sees who recorded it and into which account.
Who uses it	Accounts staff, auditors

10.19 Online fee payment (future option)	Recommended for new system
What it does	Lets parents pay through bank or mobile wallet services.
How staff use it	Parents pay from their phone; the payment is matched to the bill.
Information recorded or shown	Payment reference and status.
What it produces or changes	Payment recorded automatically.
School example	A parent pays through a mobile wallet at night; the receipt arrives immediately.
Who uses it	Parents, accounts staff

Online payment was NOT found in the audited system. It is listed only as an optional future capability.

11. School Accounts and Financial Management

School accounts cover all the school's money, not only student fees: cash and bank accounts, income, expenses, supplier payments and transfers. Fee collections flow into these records automatically and are counted only once.

Source status: cash/bank accounts, transfers, account ledgers and supplier ledgers were observed. The accounts dashboard, account heads, income entries, expense entries, accounts statement, balance sheet and income-expense summary exist in the audited menu but were LOCKED by a passcode and NOT inspected. Their descriptions below are requirements for the new system, not confirmed existing features.

11.1 Cash and bank accounts	Observed in current system
What it does	Lists the places where the school holds money.
How staff use it	Accountant adds accounts such as Cash in Hand and each bank account.
Information recorded or shown	Account name, type (cash or bank), order, status, current balance.
What it produces or changes	Every receipt and payment is recorded against an account.
School example	Cash in Hand Rs. 85,000; Bank Rs. 1.2 million.
Who uses it	Accounts staff

11.2 Transfers between accounts	Observed in current system
What it does	Records money moved between school accounts.
How staff use it	Enter from-account, to-account, amount, date and note.
Information recorded or shown	Transfer details and who recorded it.
What it produces or changes	Both balances updated; transfer history kept.
School example	Rs. 200,000 cash deposited to the bank on Monday.
Who uses it	Accounts staff

11.3 Account ledger	Observed in current system
What it does	Shows all entries for one account.
How staff use it	Choose an account and date range; detailed or summarised by day or month.
Information recorded or shown	Date, description, money in, money out, running balance.
What it produces or changes	Basis for checking against bank statements.
School example	The October bank ledger is compared with the bank statement.
Who uses it	Accounts staff

11.4 Income entries (other than fees)	In current system - NOT confirmed
What it does	Records money received from sources other than student fees.
How staff use it	Accountant enters income with category, account and reference.
Information recorded or shown	Date, category, amount, account, payment reference, remarks.
What it produces or changes	Income included in reports.
School example	Rent received from the canteen Rs. 15,000.
Who uses it	Accounts staff

11.5 Expense entries	In current system - NOT confirmed
What it does	Records money paid out.
How staff use it	Accountant enters expenses with category and supporting reference; large expenses need approval (recommended).
Information recorded or shown	Date, category, vendor, amount, account, payment reference, attachment.
What it produces or changes	Expenses included in reports; account balance reduced.
School example	Electricity bill Rs. 48,000 paid from the bank.
Who uses it	Accounts staff, principal

11.6 Account categories (heads)	In current system - NOT confirmed
What it does	Groups income and expenses, for example Utilities, Salaries, Stationery, Repairs.
How staff use it	Defined by the administrator.
Information recorded or shown	Category name and type (income or expense).
What it produces or changes	Organised reports.
School example	All electricity, gas and water bills go to 'Utilities'.
Who uses it	Accounts staff

11.7 Supplier (vendor) payments	Observed in current system
What it does	Tracks what the school owes and pays to suppliers.
How staff use it	Add vendors and record purchases and payments.
Information recorded or shown	Vendor details; entry date, type (income/expense or purchase/payment), amount, remarks.
What it produces or changes	Balance owed to each supplier.
School example	Rs. 60,000 owed to the printer; Rs. 30,000 paid this month.
Who uses it	Accounts staff

11.8 How fee collections feed the accounts	Recommended for new system
What it does	Each fee payment is posted once to the chosen cash or bank account and appears in income reports as fee income.
How staff use it	Automatic when a payment is saved.
Information recorded or shown	Link between receipt and account entry.
What it produces or changes	Fee income is never typed again in the accounts, so it is not counted twice.
School example	Today's Rs. 120,000 fee collection appears in the daily cash summary automatically.
Who uses it	Accounts staff

11.9 Daily cash summary	Recommended for new system
What it does	Shows opening balance, money in, money out and closing balance for each day.
How staff use it	Printed at the end of each day and signed.
Information recorded or shown	Per account daily totals.
What it produces or changes	Cash counted matches the system.
School example	Closing cash Rs. 92,500 matches the cash box.
Who uses it	Accounts staff, principal

11.10 Bank reconciliation	Recommended for new system
What it does	Checks school records against the bank statement.
How staff use it	Mark entries as cleared when they appear on the statement.
Information recorded or shown	Cleared and uncleared entries.
What it produces or changes	Differences are explained.
School example	A cheque deposited on 30 September clears on 2 October.
Who uses it	Accounts staff

11.11 Corrections, reversals and approvals	Recommended for new system
What it does	Fixes mistakes without deleting history.
How staff use it	A wrong entry is reversed with a reason; sensitive actions need approval.
Information recorded or shown	Original entry, reversal, reason, approver.
What it produces or changes	Complete, honest records.
School example	An expense entered twice is reversed and approved by the principal.
Who uses it	Accounts staff, principal

11.12 Financial activity history	Observed in current system
What it does	Shows who created or changed each financial record.
How staff use it	Viewed by authorised users.
Information recorded or shown	User, date, action, old and new values.
What it produces or changes	Accountability.
School example	The history shows who changed a transfer amount.
Who uses it	Principal, auditor

11.13 Financial reports	In current system - NOT confirmed
What it does	Daily collection, monthly income, monthly expenses, outstanding fees and account balances; income and expense summary.
How staff use it	Choose period and print or export.
Information recorded or shown	Totals by category and account.
What it produces or changes	Management information for the principal and owners.
School example	October: income Rs. 2.9 million, expenses Rs. 2.4 million.
Who uses it	Principal, owner

Recommendation (proposed, not observed): a full double-entry accounting system with an automatically produced balance sheet. The audited system lists a balance sheet screen, but it was locked and its contents were not verified.

12. School Rules and Configurable Settings

A central settings area lets authorised administrators change school policies without asking a developer. Each rule is applied consistently wherever it matters, and only selected users can change important settings.

The audited system has a settings screen with about 64 named rules. The audit recorded the rule names but did not change or test them, so the exact behaviour of each existing rule is NOT confirmed.

Settings group	Rules to include	Source
Academic year	Year dates, current year, working days, holidays	Observed (year selector); working days recommended
Attendance	Student late time (two time slots for different classes), teaching staff late time, other staff late time, allowed attendance statuses	Observed rule names
Fees	Due dates, late-fee rules, voucher validity days, voucher format and style, showing discounts on vouchers, signature on vouchers, whether parents may print vouchers	Observed rule names
Discounts	Who can approve discounts, maximum discount without approval	Recommended
Receipts	Receipt style, receipt date rule	Observed rule names
Report cards	Layout, highest marks or percentage column, attendance % on report card, remarks with grades	Observed rule names
Results	Show or hide class positions, ranking type, how positions are calculated	Observed rule names
Grading	Grade bands and remarks	Observed (grade scales)
Signatures	Principal and other signatures on marksheets, admit cards, roll slips, datesheets	Observed rule names
Certificates	Letterhead style, signatures on character, leaving, experience and provisional certificates	Observed rule names
Warning letters	Maximum warnings for students and staff	Observed rule names
Messages	SMS or WhatsApp, message signature, admin mobile for alerts	Observed rule names
Salary	Absent deduction, half-day deduction, late days counted as absence, tax, extra-leave deduction	Observed rule names

12.1 Central settings area

Observed in current system

What it does	One place to view and change school rules, grouped by area.
How staff use it	Authorised administrator opens the group, changes a value and saves.
Information recorded or shown	Rule name, current value, last changed by and date.
What it produces or changes	The new rule applies from the date of change in all related screens.
School example	Student late time changes from 8:00 to 8:15 for winter; attendance marks late arrivals accordingly.
Who uses it	Main administrator

12.2 Restricted change and history	Recommended for new system
What it does	Limits who can change important settings and records each change.
How staff use it	Only selected roles can edit; each change asks for confirmation.
Information recorded or shown	Old value, new value, user, date, reason.
What it produces or changes	Policies cannot be changed casually; past changes can be reviewed.
School example	The accountant can view the late-fee rule but only the principal can change it.
Who uses it	Administrator, principal

12.3 Consistent application of rules	Recommended for new system
What it does	Ensures one rule is used everywhere.
How staff use it	Automatic.
Information recorded or shown	The current value of each rule, used by every related screen and printout.
What it produces or changes	For example, the grading rule used in report cards is the same as in result reports and parent messages.
School example	Hiding class positions removes them from report cards, result sheets and result SMS together.
Who uses it	All users

Digital-attendance rules found in the audited system are excluded because digital attendance is outside the scope of this document.

13. Student, Teacher and Other Staff Attendance

Attendance is marked manually by authorised staff for students, teachers and other staff. Digital, biometric, face-recognition, QR, GPS or other device-based attendance is NOT part of this system.

Student attendance

13.1 Mark daily class attendance	Observed in current system
What it does	Records each student's attendance for a class/section and date.
How staff use it	The class teacher or office selects class, section and date; all students are listed as present by default (recommended) and the teacher changes exceptions.
Information recorded or shown	Status per student. Recommended statuses: Present, Absent, Late, Leave, and any other school-approved status.
What it produces or changes	Daily register saved; class marked as 'complete' for the day.
School example	At 8:10 am the Class 4-A teacher marks two absent and one late, then saves.
Who uses it	Class teachers, office

13.2 Missing register alert	Observed in current system
What it does	Shows which classes have not completed attendance today.
How staff use it	Visible on the dashboard attendance panel and in an attendance status list.
Information recorded or shown	Classes completed and not completed, time.
What it produces or changes	Office reminds teachers before parents are informed.
School example	By 9:00 am the dashboard shows 6-B incomplete.
Who uses it	Principal, office

13.3 Correct attendance with permission	Observed in current system
What it does	Fixes mistakes and records holidays.
How staff use it	Authorised user changes a student's status for a date, or marks a whole class or the whole school for a date range (holiday, weekend off).
Information recorded or shown	Old and new status, user, date of change, reason.
What it produces or changes	Corrected register with history.
School example	A student marked absent was actually on a school trip; the coordinator corrects it to Present with the reason.
Who uses it	Office, coordinator

13.4 Daily and monthly registers	Observed in current system
What it does	Printable class registers.
How staff use it	Choose class, section and month.
Information recorded or shown	Each student's status per day and monthly totals.
What it produces or changes	Official register for files and inspections.
School example	The October register for Class 6 is printed and signed.
Who uses it	Office, class teachers

13.5 Attendance percentage	Observed in current system
What it does	Calculates each student's attendance percentage for any period.
How staff use it	Shown on profiles, reports and report cards.
Information recorded or shown	Working days, present days, absences, late days, leaves.
What it produces or changes	A clear attendance figure.
School example	A student has 91% attendance for the term.
Who uses it	Teachers, principal

13.6 Repeated absences	Observed in current system
What it does	Identifies students absent several days in a row or below a set percentage.
How staff use it	Shown on the dashboard and in an absence report.
Information recorded or shown	Student, consecutive absent days, percentage.
What it produces or changes	Early follow-up with families.
School example	Five students absent three days in a row; class teachers call the parents.
Who uses it	Class teachers, principal

13.7 Student attendance reports	Observed in current system
What it does	Class summaries, individual student details and attendance awards.
How staff use it	Choose class and date range.
Information recorded or shown	Class-wise summary for a date; per-student leaves, absences, late days and yearly graph; students with full attendance.
What it produces or changes	Reports for meetings and parents.
School example	Full-attendance certificates for the term.
Who uses it	Principal, class teachers

13.8 Leave applications	Observed in current system
What it does	Records leave requested for students and staff.
How staff use it	Leave is entered (or submitted through a portal if available) and approved or rejected.
Information recorded or shown	Applicant, type, from and to dates, days, reason, status.
What it produces or changes	Approved leave shows as Leave, not Absent.
School example	A parent applies for three days' leave for a family wedding.
Who uses it	Office, principal

Teacher and other staff attendance

13.9 Daily staff attendance	Observed in current system
What it does	Records attendance for all teachers and other staff for a date.
How staff use it	The office marks each staff member as present, absent, late or on leave.
Information recorded or shown	Status and arrival time where recorded; separate late-arrival times for teaching and other staff.
What it produces or changes	Daily staff register.
School example	A teacher arriving at 7:50 against a 7:30 start is marked late.
Who uses it	Office

13.10 Staff attendance corrections	Observed in current system
What it does	Corrects mistakes and records holidays for staff.
How staff use it	Authorised user edits individual or bulk records.
Information recorded or shown	Old and new status, user, reason.
What it produces or changes	Correct records with history.
School example	All staff marked present for Saturday exam duty.
Who uses it	Office

13.11 Monthly staff summaries	Observed in current system
What it does	Monthly totals of present, absent, late and leave days per staff member.
How staff use it	Generated by month; printed or exported.
Information recorded or shown	Monthly totals and yearly graph per person.
What it produces or changes	Basis for appraisal and, if used, salary deductions.
School example	The October summary shows a helper absent four days.
Who uses it	Office, principal

13.12 Link to salary	Observed in current system
What it does	Uses approved staff attendance in salary calculation if the school chooses.
How staff use it	After the month's summary is approved, payroll uses it with salary rules.
Information recorded or shown	Absent days, half days, late days, leaves.
What it produces or changes	Deductions calculated automatically.
School example	Under school policy, three late days count as one day's absence.
Who uses it	Accounts staff

Attendance on the dashboard and in reports

The dashboard shows whether today's attendance is complete, a seven-day chart of student and staff attendance, and today's totals. Weekly and monthly attendance reports are described in Section 15.

Explicitly excluded: digital attendance, biometric attendance, face recognition, QR attendance, GPS check-in and any automated device-based attendance. The audited system contains digital attendance screens (one disabled), but they are outside the scope of the new system.

14. Examinations and Results Management

The examination module covers creating exams, entering marks, applying grading rules, checking results, publishing report cards and keeping results permanently by academic year.

14.1 Create exams or terms	Observed in current system
What it does	Defines each exam.
How staff use it	Exam coordinator adds the exam and selects classes; can hide it until ready.
Information recorded or shown	Exam name, date, classes, comments, whether it counts in a combined (cumulative) result, visibility.
What it produces or changes	Exam available for marks entry and datesheets.
School example	'First Term 2026' for Classes 1-10.
Who uses it	Exam coordinator

14.2 Subjects, maximum and passing marks	Observed in current system
What it does	Sets the subjects and marks for each class in an exam.
How staff use it	Coordinator confirms subject totals before marks entry.
Information recorded or shown	Subject, maximum marks, passing marks (passing marks recommended).
What it produces or changes	Correct totals and pass/fail decisions.
School example	Science is 75 marks with 33% passing.
Who uses it	Exam coordinator

14.3 Exam datesheet	Observed in current system
What it does	Schedule of papers.
How staff use it	Coordinator enters date, time, subject and paper syllabus per class; prints or shares as an image.
Information recorded or shown	Date, time, subject, syllabus, comments.
What it produces or changes	Printed datesheet and shareable image.
School example	Class 6 Mathematics on 20 April, 8:00-10:00.
Who uses it	Exam coordinator

14.4 Admit cards and roll number slips	Observed in current system
What it does	Printed documents for students taking the exam.
How staff use it	Choose class, section and exam; print. Optionally check fee defaulters first.
Information recorded or shown	Student details, roll number, exam, instructions, optional syllabus.
What it produces or changes	Printed cards and slips.
School example	Admit cards with exam rules printed for Class 9.
Who uses it	Exam coordinator

14.5 Enter and correct marks	Observed in current system
What it does	Records each student's marks.
How staff use it	The subject teacher selects class, section, subject and exam and enters marks.
Information recorded or shown	Marks per student; recommended markers for Absent and Exempt.
What it produces or changes	Marks stored against the right student, class, subject and exam.
School example	The Mathematics teacher enters 8-A marks on the day after the paper.
Who uses it	Teachers

14.6 Absent students and missing marks	Recommended for new system
What it does	Distinguishes a student who was absent from marks not yet entered.
How staff use it	Teacher marks 'Absent'; the system lists missing entries before results are prepared.
Information recorded or shown	Absent flag; list of missing marks by teacher and subject.
What it produces or changes	Results are not finalised with gaps.
School example	Two English marks missing in 7-B are flagged to the teacher.
Who uses it	Exam coordinator

14.7 Totals, percentages and grades	Observed in current system
What it does	Calculates totals, percentages and grades using the school's grading rules.
How staff use it	Automatic once marks are entered.
Information recorded or shown	Grade bands (for example A++ 95-100%), remarks for each grade; separate grade-only scheme for early years.
What it produces or changes	Calculated results.
School example	A student with 87% receives grade A with the matching remark.
Who uses it	Automatic

14.8 Class positions (optional)	Observed in current system
What it does	Calculates positions only if the school chooses to show them.
How staff use it	Controlled by settings (Section 12).
Information recorded or shown	Ranking method and tie handling.
What it produces or changes	Positions on result sheets and report cards, or none.
School example	Positions are shown for Classes 6-10 only.
Who uses it	Exam coordinator

14.9 Teacher and overall remarks	Observed in current system
What it does	Adds approved remarks to results.
How staff use it	Remarks come from the grade scale or are entered by the class teacher; the principal approves.
Information recorded or shown	Subject remarks, overall remarks.
What it produces or changes	Remarks on report cards.
School example	'Excellent progress in Mathematics.'
Who uses it	Teachers, principal

14.10 Review before publishing	Recommended for new system
What it does	Lets the coordinator and principal check results before parents see them.
How staff use it	Results stay in draft; reviewers view class result sheets, failed lists and missing marks; principal publishes.
Information recorded or shown	Status: draft, reviewed, published.
What it produces or changes	Only checked results reach parents.
School example	The principal notices a 112/100 entry and returns it for correction before publishing.
Who uses it	Exam coordinator, principal

14.11 Controlled correction after publishing	Recommended for new system
What it does	Allows corrections to published results only with permission and a reason.
How staff use it	Authorised user unlocks, corrects and republishes.
Information recorded or shown	Old and new marks, reason, user, date.
What it produces or changes	Corrected report card with history.
School example	A totalling error is corrected and a revised report card issued.
Who uses it	Principal

14.12 Result sheets and analysis	Observed in current system
What it does	Class result overview, failed students, multi-exam summaries.
How staff use it	Choose class, section and exam.
Information recorded or shown	Totals, percentages, grades, optional positions and graphs.
What it produces or changes	Printable result sheets.
School example	Class 8 result overview with a graph for the staff meeting.
Who uses it	Principal, exam coordinator

14.13 Report cards (marksheets)	Observed in current system
What it does	Produces report cards for each student.
How staff use it	Print for a class or selected students; choose a layout and border.
Information recorded or shown	Subjects, marks, totals, grades, attendance percentage (if enabled), remarks, signatures.
What it produces or changes	Printed report cards.
School example	All Class 5 report cards printed for result day.
Who uses it	Exam coordinator

14.14 Sharing results with parents	Observed in current system
What it does	Sends results to parents.
How staff use it	Send by SMS/WhatsApp; parent portal access if available.
Information recorded or shown	Result summary per student.
What it produces or changes	Parents informed on result day.
School example	'Ali - First Term: 512/600, Grade A.'
Who uses it	Exam coordinator

14.15 Results kept by academic year	Observed in current system
What it does	Keeps results permanently under the year they belong to.
How staff use it	Switch to a previous year to view or reprint.
Information recorded or shown	All exams, marks and report cards by year.
What it produces or changes	Historical results available for certificates and verification.
School example	A 2024 report card is reprinted for a transfer.
Who uses it	Office

Class tests, character assessment and question-paper tools exist in the audited system. Question-paper generation is premium-only and NOT confirmed, and it is outside the scope of this document.

15. Weekly and Monthly Reports for Students, Teachers and Classes

A reporting area brings together attendance, results and other records into weekly and monthly summaries. Every report shows its date range and academic year, and financial or personal data is shown only to authorised users.

Many individual reports were observed in the audited system (attendance, fees, results, staff attendance). Combined weekly and monthly reports described here are requirements for the new system.

15.1 Report filters	Recommended for new system
What it does	Common filters for all reports.
How staff use it	Choose week or month (or custom dates), academic year, class and section, and the student or teacher if needed.
Information recorded or shown	Selected filters printed in the report heading.
What it produces or changes	Reports never mix different years by accident.
School example	'Class 7-A, Week 12-18 October 2026, Academic Year 2026-2027'.
Who uses it	All report users

15.2 Student weekly/monthly report	Recommended for new system
What it does	Summarises one student's period.
How staff use it	Teacher or principal selects the student and period.
Information recorded or shown	Attendance (present, absent, late, leave, %), test or exam results in the period, remarks or conduct if recorded, fee status only for authorised viewers, change compared with the previous period.
What it produces or changes	Printable/PDF report for meetings or parents.
School example	Monthly report for a parent meeting shows attendance down to 82% and Mathematics marks improving.
Who uses it	Class teachers, principal

15.3 Teacher weekly/monthly report	Recommended for new system
What it does	Summarises a teacher's period using records the system keeps.
How staff use it	Principal selects a teacher and period.
Information recorded or shown	Attendance, late days and leave; assigned classes and subjects; marks entry completed on time; attendance registers completed.
What it produces or changes	Report for supervision and appraisal.
School example	October report shows two late days and all marks entered on time.
Who uses it	Principal

15.4 Class weekly/monthly report	Recommended for new system
What it does	Summarises a class or section.
How staff use it	Choose class and period.
Information recorded or shown	Enrolment and changes, attendance completion, daily and average attendance %, exam averages, grade distribution, students with repeated absences.
What it produces or changes	Class overview for coordinators.
School example	Class 6-B: 93% attendance, 3 students with repeated absences, average 68% in the term exam.
Who uses it	Coordinators, principal

15.5 Existing detailed reports	Observed in current system
What it does	Individual reports already present in the audited system, used as sources.
How staff use it	Opened from their modules.
Information recorded or shown	Monthly attendance registers, absence analysis, class-wise daily summary, staff monthly attendance, result overview, students exam summary, fee collection and defaulter reports.
What it produces or changes	Detailed data behind weekly/monthly summaries.
School example	The monthly register feeds the class monthly report.
Who uses it	Relevant staff

15.6 Print, PDF and Excel export	Observed in current system
What it does	Outputs reports for sharing.
How staff use it	Print, save as PDF or export to Excel.
Information recorded or shown	Report data with its heading and filters.
What it produces or changes	Files for meetings and records. The audited system offers Excel export and printing on its lists.
School example	Monthly class report exported to Excel for the coordinator.
Who uses it	Report users

15.7 Access restrictions	Recommended for new system
What it does	Limits sensitive data in reports.
How staff use it	Report content depends on the viewer's role.
Information recorded or shown	Role permissions.
What it produces or changes	Teachers' student reports exclude fee details unless allowed.
School example	A subject teacher's class report does not show family fee balances.
Who uses it	Administrator

Predictive analytics, such as dropout risk forecasting, is not part of the audited system and is not included here.

16. School Website Management

Authorised staff keep the public school website up to date from the school system, without editing code. Online forms on the website feed directly into the admin system for follow-up. Private student records are never published.

16.1 School identity and contact information	Observed in current system
What it does	Keeps name, logo, contact details, map location, branches and social media links current.
How staff use it	Edit in website settings.
Information recorded or shown	Address, phone, email, map location, branch names and addresses, Facebook, YouTube, TikTok and WhatsApp links.
What it produces or changes	Correct details on every website page.
School example	A new WhatsApp number is updated once and appears on the contact page.
Who uses it	Website editor

16.2 Home page content	Observed in current system
What it does	Controls the main page.
How staff use it	Edit slider pictures and headings, key figures and 'why choose us' text.
Information recorded or shown	Up to four slider images with headings and a button, years of experience, number of trained teachers, introduction text.
What it produces or changes	Updated home page.
School example	An 'Admissions Open' banner is placed on the first slide in February.
Who uses it	Website editor

16.3 About, message, mission and team pages	Observed in current system
What it does	Maintains the school's standing information pages.
How staff use it	Edit text and pictures; choose staff to show on the team page.
Information recorded or shown	About text, director's message, mission and vision, selected staff names, designations and photos.
What it produces or changes	Up-to-date information pages.
School example	The new principal's message is published.
Who uses it	Website editor, principal

16.4 Announcements, news and events	Observed in current system
What it does	Publishes news and event posts.
How staff use it	Add a post with title, short and full description, picture and date.
Information recorded or shown	Post content, date, posted by.
What it produces or changes	Posts shown on the website.
School example	Board result news with a photo of top students (with consent).
Who uses it	Website editor

16.5 Photo galleries	Observed in current system
What it does	Albums of school photos.
How staff use it	Create albums and add photos with titles and order.
Information recorded or shown	Album, photo, title, description, date.
What it produces or changes	Gallery pages.
School example	'Sports Day 2026' album.
Who uses it	Website editor

16.6 Important dates, admission information and downloadable forms	Recommended for new system
What it does	Publishes the calendar highlights, admission procedure and forms.
How staff use it	Choose calendar events and documents to publish.
Information recorded or shown	Event dates, admission information, downloadable files.
What it produces or changes	Families find information without calling.
School example	Admission form PDF and test dates published in March.
Who uses it	Website editor

16.7 Online admission enquiry form	Observed in current system
What it does	Lets families enquire online.
How staff use it	Families submit the website form; it arrives in the admin system's admission enquiries.
Information recorded or shown	Child's name, gender, class, date of birth, parent name and phone, address, previous school, remarks.
What it produces or changes	New submission counted on the dashboard; staff follow up and add remarks.
School example	Three online enquiries arrive overnight and are called the next morning.
Who uses it	Admission office

16.8 Job application form	Observed in current system
What it does	Receives job applications.
How staff use it	Applicants submit details and CV; staff review in the admin system.
Information recorded or shown	Name, gender, post applied for, phone, qualification, address, CV, remarks history.
What it produces or changes	Applications in one inbox.
School example	Twenty applications for a Science teacher post are shortlisted.
Who uses it	Principal, office

16.9 Feedback / contact form	Observed in current system
What it does	Receives messages from parents and the public.
How staff use it	Reviewed in the admin system with remarks.
Information recorded or shown	Name, phone, subject, message, remarks history.
What it produces or changes	Feedback recorded and answered.
School example	A suggestion about pick-up traffic is forwarded to the administrator.
Who uses it	Principal, office

16.10 Edit, preview, publish and remove	Recommended for new system
What it does	Controls when content goes live.
How staff use it	Save as draft, preview, publish, and unpublish outdated items.
Information recorded or shown	Status (draft, published, removed), publish date, responsible person.
What it produces or changes	Only checked content is public; old content removed on time.
School example	Last year's admission notice is unpublished in May.
Who uses it	Website editor

16.11 Responsibility and separation of private data	Recommended for new system
What it does	Records who is responsible for each page and keeps website content separate from student records.
How staff use it	Each page shows its owner; nothing from student profiles is published unless deliberately added.
Information recorded or shown	Page owner, last edited by.
What it produces or changes	No private student information appears on the website by default.
School example	Photos of students are only published with consent.
Who uses it	Administrator

17. How the System Works Together

The modules share the same records. A student is linked to a family, a class and section, a fee account, an attendance register and exam results; a teacher is linked to classes, subjects, attendance and salary. The everyday workflows below show how information flows from one module to the next.

A. Setting up the school	
1	Enter school profile and open the academic year
2	Create classes, sections and subjects with maximum marks
3	Create staff records, user accounts and permissions

B. Admitting a student	
1	Record the admission enquiry
2	Follow up and approve admission
3	Create the student record from the enquiry
4	Link the student to a family
5	Assign class and section
6	Apply the admission fee and other initial charges

C. Collecting fees	
1	Generate fee bills and print vouchers
2	Receive full or partial payment
3	Issue a receipt
4	Update the outstanding balance
5	Include the payment automatically in account reports

D. Running an exam	
1	Create the exam and confirm subjects and marks
2	Teachers enter marks
3	Coordinator and principal review results
4	Publish and print report cards
5	Keep results in the academic history

E. Daily and monthly attendance	
1	Mark student and staff attendance manually
2	Review missing registers on the dashboard
3	Prepare weekly and monthly attendance reports
4	Use approved staff attendance for payroll where applicable

F. Daily dashboard review	
1	Review dashboard alerts each morning
2	Follow up admissions, missing attendance, birthdays, complaints, tasks and notices

G. Website to office	
1	Update website information
2	Receive an online form submission
3	Follow up through the admissions office or relevant team

Key links between modules

When this happens...	...these modules are affected
A student is enrolled	Student record, family, class list, fee billing, attendance register, exam marks entry
A fee payment is saved	Student/family ledger, receipt, defaulter list, cash/bank account, financial reports
A student moves section or is promoted	Class lists, attendance registers, marks entry, reports (history kept under the old class)
A staff member leaves	Login deactivated, removed from timetable and active lists, attendance and salary history kept
A rule is changed in settings	Every screen and printout that uses the rule (for example late times, positions, voucher format)
Attendance is not entered	Dashboard alert; reports show the register as incomplete

18. Glossary

Term	Meaning
Academic session (academic year)	The school year, for example 2026-2027. Records are stored under the year they belong to.
GR number	General Register number - the student's unique school registration number.
Family ID	A number that links siblings and their parents into one family record.
Fee head	A type of charge, such as tuition fee or admission fee.
Fee bill (invoice)	An amount charged to a student for a fee head and period.
Voucher	A printed slip that tells the family what to pay and by when, used for payment at the school or bank.
Receipt	Proof that money has been received.
Outstanding balance	Total charges minus discounts minus payments - the amount still due.
Defaulter	A student or family with overdue unpaid fees.
Ledger	A list of all charges and payments (or money in and out) over time.
Role / permission	The type of user account and what that user is allowed to see and do.
Register	The official daily or monthly attendance record.
Report card (marksheet)	The printed result of a student for an exam or term.
Datesheet	The timetable of exam papers.
Cumulative result	A result that combines more than one exam, such as first term and final term.
Audit trail (activity history)	A record of who did what and when in the system.

19. Scope and Assumptions

Included in this document

- The 16 functional areas in this document, in the order listed
- Manual attendance for students, teachers and other staff
- Fee heads, billing, payments, receipts, discounts, late fees and fee reports
- School accounts: cash/bank accounts, income, expenses, transfers, suppliers and financial reports
- Dashboard based on the supplied screenshot
- Website content and online forms

Explicitly excluded

- Digital, biometric, face-recognition, QR, GPS and device-based attendance
- Transport management (except an optional transport fee head)
- School shop / point of sale and inventory or asset management
- Online entry tests, question-paper generation, syllabus and lesson-planning systems
- Visitor management beyond the dashboard visitor count
- Programming, database design and technical implementation details
- Predictive analytics

Not confirmed by the original audit

- Accounts dashboard, account heads, income entries, expense entries, accounts statement, balance sheet and income-expense summary - locked by passcode, not inspected
- Fees dashboard and profile errors report - locked by passcode, not inspected
- Parent, student, teacher, accountant and help-desk portals and the mobile app - referenced but not inspected
- Exact behaviour of the ~64 settings rules - names recorded, not tested
- Results of any action (saving, generating, sending, printing) - buttons were not pressed during the audit
- Digital student attendance - disabled on the audited account
- Premium-labelled modules (question papers, syllabus and lesson planning, assets) - not confirmed
- Online fee payment - not found in the audited system

Assumptions

- Features marked 'Recommended' are proposed requirements for the new system, not existing features.
- Fee heads, statuses, roles and rules are examples; the school can rename, add or switch them off.
- Examples use illustrative names and amounts and are not real school records.
- Messaging by SMS, WhatsApp or app notification depends on the services the school subscribes to.
